

Allscripts and Elsevier Join Forces to Elevate Health Care and Patient Outcomes for U.S. Military Members and Families

March 9, 2015

Elsevier CPM Framework(TM) Enhances Allscripts Sunrise(TM) Acute Care With an Evidence-Based Framework to Support Clinical Decision at Point of Care

CHICAGO, March 9, 2015 (GLOBE NEWSWIRE) -- Celebrating a 10-year partnership, [Allscripts](#) (Nasdaq:MDRX) and [Elsevier Clinical Solutions](#) are raising the level of patient care decision-making support for clinicians by embedding Elsevier's CPM Framework in Allscripts Sunrise electronic health record (EHR). The collaboration strengthens coordination of patient care capabilities in the Allscripts Sunrise EHR, the core of the solution Allscripts and CSC (NYSE:CSC) exclusively proposed to the U.S. Department of Defense (DoD) for the DoD Healthcare Management System Modernization (DHMSM).

DHMSM seeks an open EHR solution that is interoperable between a wide range of public and private healthcare facilities and military treatment facilities to improve healthcare services for military members and their families.

Access to Best Practices Improves Bedside and Theater Care

Elsevier's CPM Framework includes an interprofessional practice model designed to support care providers in clinical decision-making and applying best practices at the point of care. Through the Allscripts Sunrise solution, clinicians have access to patients' health history in a way that is intentionally designed to support the application of the CPM Framework. Treatment plans are supplemented with evidence-based best practices, which improves quality of care and patient outcomes.

"Open access to data and best treatment options are critical for all patients, but especially for military personnel and their families who often relocate back to the United States after their foreign service," said Allscripts Chief Quality and Outcomes Officer Diane Bradley, MD. "By integrating the CPM Framework in Allscripts Sunrise EHR, clinicians have instant access to a comprehensive system of clinical practice models to guide their care decisions."

Field-tested Framework Improves Patient Outcomes

Members of the military injured in the line of duty may transfer between healthcare facilities in a number of countries in a short amount of time. The Allscripts Sunrise EHR and Elsevier CPM Framework help ensure continuity of care by providing clinicians at every site a complete picture of patients' history and rationale for treatment plans, which are based on best practices that are uniquely individualized to each situation.

"The CPM Framework elevates the standard of care by providing field-tested access to best practices for all healthcare professional treating military personnel and their families, no matter where they are located in the world," said Michelle Troseth, MSN, RN, DPNAP, FAAN, chief professional practice officer for Elsevier Clinical Solutions. "Allscripts Sunrise breaks down barriers to getting information clinicians need to efficiently treat patients and improve the care process."

Proven Solutions in Action

Allscripts Sunrise EHR and Elsevier CPM Framework solution are used today by healthcare organizations such as Abington Health and North Shore-LIJ Health System (NSLIJ).

"Our interdisciplinary care providers rely on the Elsevier CPM Framework available through our Allscripts Sunrise system to inform the care decisions they make when treating patients," said Chief Nursing Informatics Officer of Abington Health Diane Humbrecht, MSN, RN-BC. "The result is more efficient and improved patient care because treatment plans are grounded in industry best practices."

"Elsevier's evidence based content provides a high level of consistency of clinical practice, guiding and facilitating best practices to help nurses access the latest evidence at the bedside and help patients achieve optimal outcomes," said Susan Robertson, MSN, RN, CPHQ, AVP, Clinical Information Systems Integration and Implementation, OCIO of NSLIJ.

About Allscripts

Allscripts (Nasdaq:MDRX) is a leader in healthcare information technology solutions that advance clinical, financial and operational results. Our innovative solutions connect people, places and data across an Open, Connected Community of Health™. Connectivity empowers caregivers to make better decisions and deliver better care for healthier populations.
