

Baylor Scott & White Health Utilizes Allscripts dbMotion™ Solution to Connect Multiple EHR Systems

October 13, 2016

Technology coordinates comprehensive data exchange between electronic health record (EHR) systems in North and Central Texas

CHICAGO, Oct. 13, 2016 (GLOBE NEWSWIRE) -- Baylor Scott & White Health, the largest not-for-profit healthcare system in Texas, is now utilizing dbMotion™ Solution to streamline the exchange of electronic health record (EHR) data between disparate EHR systems used by more than 3,800 physicians who care for 2.7 plus million patients. The healthcare system uses the Allscripts (NASDAQ:MDRX) dbMotion interoperability platform to coordinate care with harmonized, structured data at the point of care. dbMotion is an integral piece of CareInMotion™, Allscripts' population health platform.

With a national focus on interoperability and examples of stressed financial repercussions with single-system approaches, many organizations are alternatively turning to advanced, EHR-agnostic technology to exchange health data successfully.

"Everything we do is aimed at improving the patient experience," said Joel T. Allison, CEO, Baylor Scott & White Health. "As we continue our commitment to population health management and transforming how health care is delivered, it's important that our clinicians working on different EHR systems can access a single, comprehensive view of the patient's health record."

According to a [recent ONC report](#), the most common reason clinicians do not use data from other systems is because it is not available in their EHR workflow. Baylor Scott & White Health is connecting its multiple disparate systems using dbMotion, which delivers relevant patient data to providers using the dbMotion™ Agent within their EHR native workflow. The dbMotion Agent alerts providers when new clinical information is available on their patients to help improve the provider-patient experience.

"Since Allscripts dbMotion went live with Baylor Scott & White Health in March 2015, we have helped the system process more than 36 million messages and have loaded more than 2.7 million patients," said Allscripts Chief Executive Officer Paul M. Black. "The technology provides a more complete picture of the patient's electronic health record across the health system."

About Baylor Scott & White Health

Baylor Scott & White Health, the organization formed from the 2013 merger between Baylor Health Care System and Scott & White Healthcare, is today the largest not-for-profit health care system in the state of Texas. With total assets of \$9 billion and serving a population larger than the state of Virginia, Baylor Scott & White Health has the vision and resources to provide its patients continued quality care while creating a model system for a dramatically changing health care environment. The organization now includes 49 hospitals, more than 800 access points, more than 5,800 active physicians, 35,000 employees and the Scott & White Health Plan.
